The following slide show looks at the many available features and styles available for ranges. You'll learn about ranges with gas heat or electric heat; traditional burners or extras like griddles; a typical oven cavity or a double oven range.

But one thing you'll only find on this page is...

An Easy-to-Clean Oven.

In your fight against bottom-of-the-oven grime—baked-on casserole goo, the charred artist formerly known as pie filling—there's a new knight in shining enamel. It's called AquaLift™, a new cleaning technology from Maytag®, and it makes cleaning the oven as easy as baking cookies with pre-made dough. With AquaLift™ self-clean technology, you can simply pour water on the enamel coating at the bottom of the oven and the low-heat temp cleans your oven in less than an hour. Once the self-clean cycle is over, do a quick wipe down and you're finished. The process is fast, efficient, and -- to use some very scientific lingo -- not as stinky as cleaning regular ovens. AquaLift™ technology can be found on electric, gas and induction ranges made by Maytag®. Peruse the rest of this slide show to find other ranges with unique features.
